ANDROID & EMBEDDED DEVELOPER

RESUME | 2026

Shabd Vasudeva

Dedicated Computer Science and Engineering student with over 4.5 years of hands-on, self-directed experience in Android application development and system-level engineering. Passionate about exploring low-level software, embedded systems, and reverse engineering. Recognized for porting and modifying proprietary OEM applications for large communities, bridging the gap between high-level application design and core system functionalities.

WORK EXPERIENCE

- **Devantra Innovations** (Current)

Full Stack Developer (Intern)

Designing and developing responsive full-stack applications, utilizing modern front-end frameworks and robust back-end architectures.

Collaborating with the engineering team to implement seamless user interfaces and optimize database queries for enhanced performance.

- **Series Space** (Current)

Embedded System Engineer (Registered Rocketry Company)

Engineering embedded systems and applying low-level programming concepts to integrate hardware interfaces for rocketry operations.

- **Independent / Community Projects** (4.5+ Years)

Android Platform & Open-Source Developer

Accumulated nearly five years of practical experience learning, architecting, and building Android applications.

Contributed to various AOSP (Android Open Source Project) ROM ecosystems and open-source applications, focusing on bridging the gap between application logic and deep system framework behavior.

EDUCATION

- **Chandigarh Engineering College (CGC Landran)** (1st Year)

B.Tech in Computer Science & Engineering (Core)

- **Kendriya Vidyalaya No.4, Ambala Cantt** (82.8%)

12th Grade (Senior Secondary)

- **Kendriya Vidyalaya No.4, Ambala Cantt** (84%)

10th Grade (Secondary)

TECHNICAL SKILLS

- **Java**
  Android SDK (Material Design, AndroidX), JavaFX, Object-Oriented Programming (OOPs), SQLite
- **C++**
  Arduino programming, Algorithms, Data Structures & Algorithms (DSA), OOPs, SQLite
- **Python**
  OOPs architecture, Chaquopy (Python for Android)
- **JavaScript & Web**
  NodeJS, HTML, CSS, React, OOPs, TypeScript
- **Databases**
  SQL, SQLite3, Jetpack (JPC) Room Database
- **Linux & Tooling**
  Bash scripting, Basic Linux Terminal Commands, Ubuntu (Primary OS)

PROJECTS, RESEARCH & LINKS

PROJECTS

EKM AI

Kotlin / Jetpack Compose · GitHub Repository

Engineered a modern, AI-integrated Android application using Kotlin and Jetpack Compose to deliver a highly responsive and expressive Material Design user interface.

Implemented robust state management and seamless integration with backend functionalities for a smooth user experience.

My Vault

Java · GitHub Repository

Developed a secure data vault application implementing strong Object-Oriented Programming principles in Java.

Integrated local storage systems to ensure reliable data persistence, security, and retrieval functionalities.

RepoRover

TypeScript · GitHub Repository

Architected a streamlined Graphical User Interface (GUI) tool using TypeScript to simplify complex Git version control commands.

Optimized the developer workflow by lowering the learning curve for utilizing Git repositories through visual interactions.

Android OEM Reverse Engineering & System Porting

Demo via @AndroidPortWorld (19k+ Subscribers)

Reverse-engineered proprietary OEM Android applications, modifying internal frameworks and dependencies to allow cross-device compatibility.

Deployed advanced systemless modules via Magisk and KernelSU (KSU) root solutions to seamlessly integrate ports into non-native operating systems.

Built and maintain trust with a dedicated community of over 19,000 subscribers by delivering stable, secure, and highly sought-after system modifications.

RESEARCH & LINKS

Research Interests

Deeply interested in discovering and developing novel Security mechanisms and Artificial Intelligence algorithms within Computer Science, driven by the ambition to make a lasting historical impact on the technological landscape.
